

The “app.pathRW02” folder

The “app.pathRW02” folder is created inside of the folder where your RinkWriter application (software) is located. It is automatically created the first time you run the software.

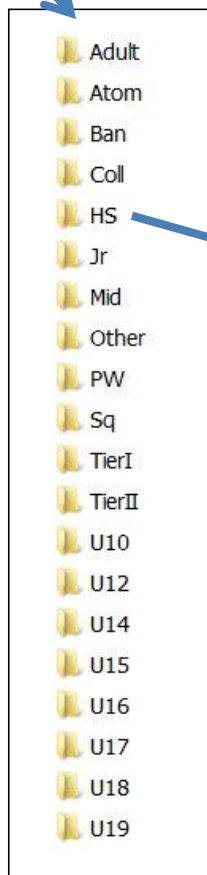

The “app.pathRW02” folder contains 2 folders named as “Game” & “Teams”

The “Teams” folder contains a folder for each level of play and each of these folders contains the team rosters in each division.

The “Game” folder contains the data files for your current game and the existing default files.

High School Rosters

All of these files are automatically created and saved by the software. The scorekeeper does not have to know about any of these, but it is helpful for someone importing rosters to know about them...
