

The “app.pathRW02” Folder

The “app.pathRW02” folder is automatically created inside of the RinkWriter folder where the application (software) is located. It is automatically created the first time you run the software inside of your RinkWriter folder.

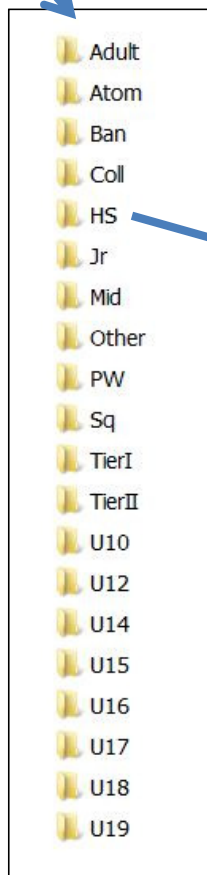

The “app.pathRW02” folder contains 2 folders. They are named as “Game” & “Teams”.

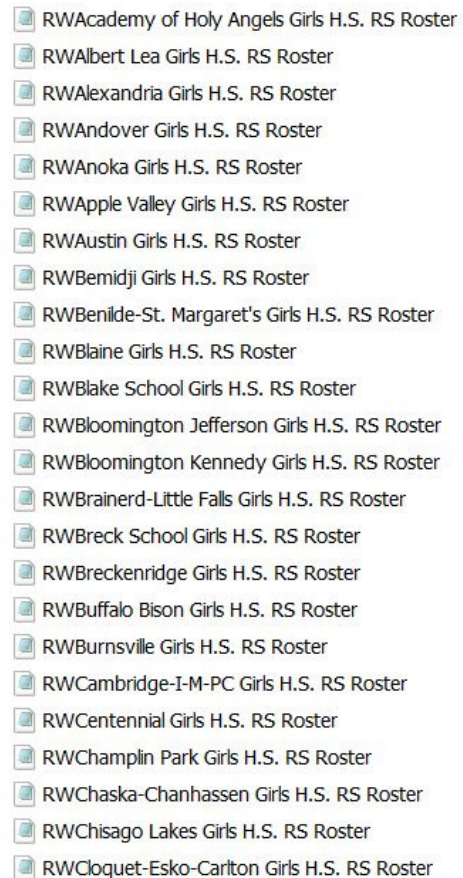

The “Teams” folder contains 20 folders...one folder for each level of play. Each folder contains the corresponding team rosters.

The “Game” folder contains the data files for your current game and the existing default files.

High School Rosters

All of these files are automatically created and saved by the software. The scorekeeper does not have to know anything about these, but it can be helpful for any persons setting up the software on a computer.
